

EQUILIBRIUM MEASURES FOR ATTRACTIVE-REPULSIVE POWER LAW INTERACTIONS

Sheehan Olver
Imperial, UK
s.olver@imperial.ac.uk

We discuss numerical methods for computing equilibrium measures which are of significant importance in random matrix theory, and extensions to the case of attractive-repulsive interactions, in particular where the particles interact according to a power-law. This includes new recurrence relationships of power law kernels applied to weighted orthogonal polynomials.

Joint work with José Carrillo (Oxford) and Timon Gutleb (Oxford).
